

360

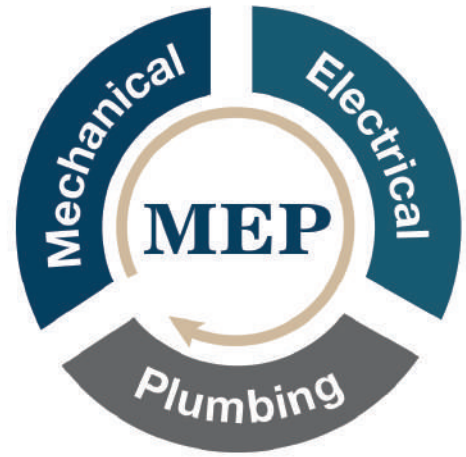

SOLUTION

AIRTECH
RELIABILITY MATTERS

A MESSAGE FROM THE MANAGING DIRECTOR

Airtech has been established as the largest and the most preferred MEP Company in Nepal. Our steady growth throughout these years can be attributed to our strong focus on our commitment for our customers. Our aim has always been to meet and exceed the expectation of our customers in terms of quality products, quality services and timely completion of the project.

Our customers appreciate the fact of having one umbrella solution for their MEP (Mechanical, Electrical, Plumbing) requirement for the better coordination and timely completion of the projects. Considering their advice, we decided to diversify into construction industries with one stop 360° building solutions.

The real credit of our continuous success rests on the performance of our people which also leads us to transform our company slogan as "Reliability Matters". We are privileged to be surrounded by competent, well-motivated, highly skilled personnel with strong engineering skills. We are constantly improving our work methodology to ensure world class services to all our clients.

As a key player in the contracting sector, we understand our profound societal role and influence. We are dedicated to contributing to the economic development and modernization. Through our projects, we aim to enhance the quality of life, create job opportunities, and support the growth opportunities. Our focus on sustainable practices ensures that we not only build for today but also for future generations.

We are confident that Airtech would continue to provide the best services and would help in the infrastructural development of our country. I would also like to convey my sincere thanks to all our customers, business associates, project partners etc. who had been providing us continuous support which had enabled us to be the largest MEP Company in Nepal.

AIRTECH

RELIABILITY MATTERS

Established in the year 2000 Airtech offers best engineering solution for a wide spectrum of customers in areas related to Air Conditioning, Ventilation, Electrical, Plumbing, Fire Fighting, Fire Alarm System, Building Management System, ELV, IT etc. for 360° building solutions and is the largest and the most preferred MEP company in Nepal. We strongly focus on excellence and personalized service to provide the highest quality professional installation for the all the building solution.

Airtech provides high level support to our customer base, which ranges from small enterprises to large building solutions. We have expertise in supporting systems from globally renowned manufacturers, and consistently train our staff to stay up to date on all new products and services in our industry.

Airtech MEP projects are one stop solution for the construction fundamentals into systematic, comprehensive and collaborated solution for effective operation. The integration between the diverse techniques and procedures in the mechanical, electrical and plumbing, MEP resolves the complexity and transforms into a synergy and success.

Airtech offers complete building contracting solutions from supply, installation, testing and commissioning of the MEP systems that includes:

Air-Conditioning Chiller/ VRF	Ventilation Works
Internal Electrification Works	Fire fighting System
External Electrical Works	Hydro Pneumatic Systems
Plumbing / Sanitary Works	Fire Alarm System
Sewage Treatment Plant	Building Management System
Water Treatment Plant	Access Control
Hot Water System	CCTV
Display Solution	Hotel Mode Television

Mission

Airtech strives to meet the need of its customer by providing complete engineered, innovative and customized technology solutions that constantly exceed expectations. The mission of Airtech is to build our reputation for integrity, excellence, reliability, flexibility, responsiveness, innovative services and team work.

Vision

Airtech's success is driven by its complete focus on customers. Airtech corporate vision is "Customer for Life". We earn our customer loyalty by listening to them, anticipating their requirements and working to create value for them. Growth, longevity and financial success will follow naturally.

Our Drivers

A result oriented approach – through an efficient and “can do attitude”.

Integrity – we take responsibility of what we promise.

Excellence - through proper thinking, planning and implementation.

Flexibility – we understand client’s need.

Responsiveness - a receptive approach to customer needs.

Innovative Services - research and a creative approach to problems and solutions.

Team Work - an open exchange of information and resources with our clients.

Expert Solution

Clients count on Airtech for solutions that are creative, contemporary, reliable and sustainable. We are an MEP contracting company that collaborates with all the projects stake holders because we are disciplined in continuing education and in-cross training of our team. We have developed exceptionally relevant expertise in the equipment and the total system we execute. We value the aesthetic that an architect brings and honor the needs of the project owner. Above all we put the clients first at every stage of our projects.

“Airtech has the expertise to understand the special requirements of each customer.”

Service Support

Airtech has an excellent team of competent and trained technical experts to provide prompt and efficient after sales services to its valued customers. Our engineers are trained at various manufacturing and training centers of globally renowned companies at Germany, Japan, Italy, Malaysia, China, India etc. The world class training has given our technical team deep insights into the designs, selection and installation needs of each major customer applications.

Airtech is proud to introduce the first mobile service van back in 2015 A.D. to support and provide on site maintenance and trouble shooting. With our dedicated service team and industry expertise, we guarantee uninterrupted performance, energy savings, and peace of mind for all your HVAC & MEP needs.

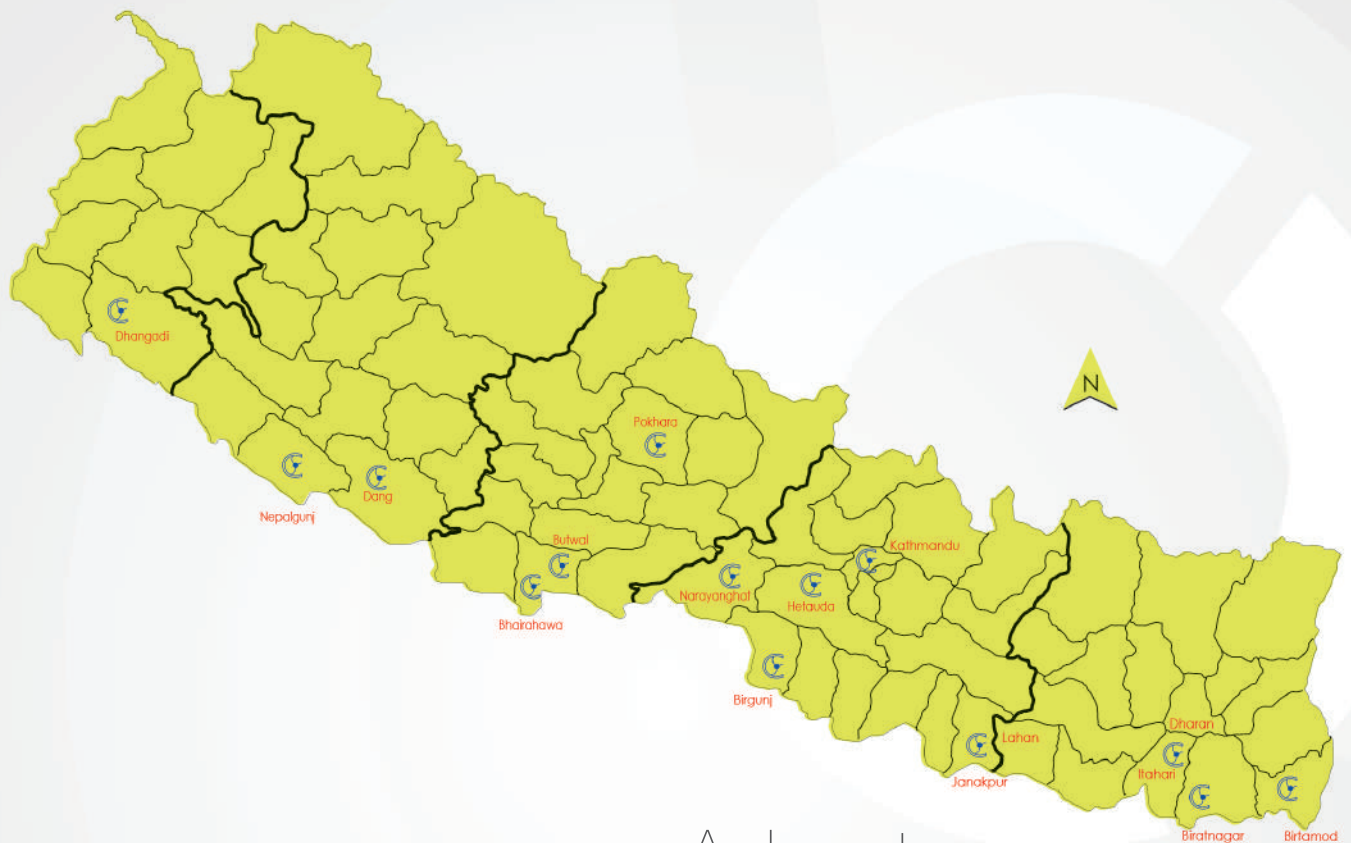

Unmatched Engineering

Airtech offers our customers best engineering unmatched in the construction industries. We focus on detailed engineering in order to get the best of the MEP System. All check-up of fundamental calculation is followed by optimal design and criteria for MEP execution at every stage of project. Engineering process takes care of all required check points in the design, supply and subsequent installation of the system. Powerful software packages helps generate high quality drawings. Which more often than not, are used as the base for preparation of co-ordinate drawings of other agencies. Airtech believes that people are the most valuable asset of an organization. Our people are our core strength. Airtech is an equal opportunity employer and have the right blend of people converging, blending and working together in our organization, to form an excellent team of competent professionals. Airtech believes in contemporary people management practices by hiring the right people, creating a delightful atmosphere at work place and ensuring a growth path for all our performers.

Our Network

Airtech has an extensive network of installation and service team covering all the important towns of Nepal. Our customer can get the best sales and services support by our well trained & competent teams all over Nepal. We have been conducting regular training programs for the technical team so that our customers are assured of best service support at all times.

Advantage Airtech

Airtech has built for itself enviable reputation of one stop solution provider. Airtech design expertise, supported by world class equipment and exceptional project execution capabilities help the company to sustain leadership position in the country. It is no wonder that Airtech has been associated with the most prestigious projects and installation in Nepal. Being dynamic and flexible organization, Airtech is in the position to adopt customer specific engineering solutions.

"We have been conducting regular training programs for the technical team of our dealers so that our customers are assured of best service support at all times."

Commitment to Maximize Energy Efficiency & Eco Friendly

Energy is a critical resource and the rising costs of power can have a major impact on the bottom line of any corporate or commercial organization. Air conditioning constitutes nearly 50– 55% of the total power consumption in office buildings and this figure rises to as high as 70% in hotels and hospitals.

Airtech has been focusing on energy efficiency in air conditioning and is committed to the cause. It has launched several energy- efficient and eco friendly air-condition products over the past decade which have been appreciated by all the customers. Airtech has been the leading company in phasing out R-22 refrigerant from its product portfolio.

“Airtech has been focusing on energy efficient and environment friendly electro mechanical equipments.”

Why Airtech MEP?

Airtech MEP takes construction to the next level by integrating multiple expertise into one manufactured module- for seamless installation. We provide one-stop comprehensive MEP services of our valued customers.

From the start of any project, we understand the need to develop a building where the internal environment is balanced, providing comfortable spaces for occupants while keeping the running costs as low as possible. Achieving this requires an integrated approach, working with all members to ensure that all the systems are strategically integrated into the project.

With leading experts in all aspects of building physics supported by state of the art building performance analysis tools sophisticated technology, we bring powerful thinking in any project. Working collaboratively, we will always pursue a sustainable solution exploring the use of the building's location, orientation, shading and structural form to drive down the need for mechanical installations. Our sustainable, high-performance, low-energy solutions will be integrated into the very fabric of the building to create light and airy spaces for living and working. We bring leading edge thinking to projects in an approach that ensures compliance with local regulations and standards.

We are steadfast in our pursuit to surpass client expectations, and we value their continued recommendations. Our clients hold immense significance to us, and we collaborate closely with them throughout the project lifecycle, ensuring that their envisioned outcomes are effectively delivered by our proficient team.

Irrespective of project size or location, we bestow equal importance upon all endeavors. To ensure the flawless execution of works conceived by Airtech, we conduct site visits, upholding the highest standards of implementation quality.

Our Services

Airtech provides complete solution for Mechanical, Electrical, Firefighting and Plumbing services in single umbrella. Airtech dedicates in providing customers with proven professional services that simplify procedures, ensures transparency and provides cost effective solutions.

We have highly dedicated and qualified team of Project Managers, Project Engineers and Expert Technicians etc. in various MEP fields to ensure high quality work within the stipulated time frame.

Hence Airtech has established a strong and prolonged relationship with its esteemed clients.

Mechanical Services

Airtech endeavours to offer a high level of expertise within the mechanical engineering jobs.

We have a team of experienced, competent and qualified engineers.

We encourage our engineers to get involved in various comprehensive trainings, allowing us to stay on the cutting edge of new technology.

Airtech role involves the creation of new mechanical engineering activities and services for clients, as well as the optimization of existing activities.

The mechanical design and structure of construction, most specifically the heating and cooling systems, are crucial in determining the comfort of life inside the building.

Hotels & Resorts

Our target is to provide a comfortable ambient to the guests round the year

AIRTECH understands the characteristics and demands of air-conditioning in hotels. Our target is to provide a comfortable ambient to the guests round the year in different areas including guest rooms, restaurant, lobby, health club, banquet hall, casino, discotheque etc. Each of the above area has its distinct requirement and we design the system based on the precise requirement of the different areas.

Our design takes into account some very important factors in hotels like

Partial load due to varying occupancy rates.
Higher load at more occupied zones like banquet halls, restaurants' etc.
Frequent door openings in the reception areas.
Ventilation to utility areas such as kitchen, toilets, car parking's etc.
Low noise level in the rooms.
High Energy efficiency.
Aesthetics of the hotel.

Pharmaceuticals & Laboratories

Airtech has been associated with practically all the major pharmaceutical companies in Nepal. It has helped in maintaining critical parameters for the various process requirements extending from manufacturing of tablets, ointments, capsulation, liquids and sterile products. The pharmaceutical industry has to conform to WHO GMP standards as well as other stringent standards. Airtech is fully aware of validation parameters and can help its customer with conforming to the same. Airtech HVAC systems are designed to fulfil precise air-conditioning needs in terms of temperature, relative humidity and other parameters like pressure gradients, air changes, air filtration, air direction for different class of cleanliness required in Pharma industries.

Hospitals

Designed and installed HVAC systems for almost all the major hospitals

Airtech is a pioneer in hospital HVAC system in Nepal. It perfectly understands the importance of air conditioning in the healthcare industry. Airtech has designed and executed HVAC systems for almost all the major hospitals in the country and is a key partner when it comes to maintaining the air quality inside the medical centers. We also have to our credit, supply and installation of operation theatre air-conditioning systems with laminar airflow pattern in several reputed medical facilities.

Our HVAC Systems provide you with a comprehensive solution for all types of hospital requirements.

Patient rooms, consulting rooms, OPDs and receptions require general comfort air-conditioning.

Treatment areas such as ICU, operation theatres and post operation recovery rooms have stringent demands with regard to indoor air quality, airflow patterns, cross-contamination control and a germ-free environment.

Diagnostic equipment areas like MRI, CATH-LAB, CT scan etc. require air-conditioning that ensures smooth and hassle-free functioning of high end and life saving medical equipment.

We consider all these unique requirements while offering expert healthcare solutions. We also provide high levels of filtration to maintain air quality levels and prevent the release of in-born pollutants outside.

Since air-conditioning in any hospital operates on a 24 x 7 basis, it becomes imperative that the equipment should not only be reliable but also energy efficient. Needless to say, our solutions can help you save up to 45% on your electricity bills.

Banks & Corporate Institutions

We understand their specific requirement to provide them the ultimate solution

Airtech is proudly associated with Nepal's leading commercial banks, financial institutions and corporate offices. We understand their specific requirement to provide the ultimate solution in terms of optimum performance, highest energy efficiency, maintaining aesthetics looks as per architect & interior designer. Some of the basic requirements of banks and corporate institutions are

High Energy efficiency

As these institutes need to run the Air Conditioning System on all working days.

Extended working hours

In some corporate office there is partial requirement of Air Conditioning even during extended working hours and on holidays.

Easy compatibility with DG sets

Considering the current energy crisis most of the AC units run on DG sets. Accordingly the A.C equipments must be selected which can operate with the DG.

Customer Service Areas

Faster air circulation & temperature control in customer service areas.

Aesthetics

We need to plan the units which can ensure that the overall looks of the entire building both inside as well as outside is as per the expectation of the Architect / interior designers.

Server Rooms

Unlike Comfort Air conditioning server rooms need high sensible cooling and even need to operate in cooling mode in winters. Based on this and also based on heat dissipation suitable AC must be selected. It is also recommended to have a standby unit as the server rooms need cooling 24 X 7 – 365 days.

Rated Available Power Supply

Some of the Banks / Corporate institution does not have the required correct voltage to run the Air Conditioners. In such cases, we need to select the equipments which can operate at lower voltages or suggest correct capacity of Voltage stabilizer depending upon the AC load & available power conditions at that site.

Based on all the various parameters suitable, HVAC system must be designed and selected. Normally the most ideal system for High end corporate buildings is the VRV/VRF systems. It gives a great flexibility in the system design by allowing the selection of the units with the following major advantages.

Extended long piping lengths up to 1000 meters.

Multiple indoor up to 64 Nos with a single outdoor.

High Diversity indoor to outdoor ratio up to 200% depending upon the application.

High Energy efficiency units leading to power saving up to 67%.

Extremely low sound pressure level ensuring whisper quiet operation.

Auditorium hall Theatres & Studios

Airtech understand the specific requirements of theaters, halls, studios etc. and provides relevant appropriate HVAC solution

Airtech understands the specific requirement of different types of auditoriums halls, theatres , studios, recording studio, FM studio, lecture halls etc. Our system design includes the following major criteria.

There is a specific peak load demand in auditorium for a short time and the desired installed HVAC system must be able to take care of the same.

Noise is a very important criteria specially for recording studios, lecture halls & theatres. Based on the acceptable noise level Airtech is able to design the ducts with suitable acoustic insulation to meet the most stringent noise levels.

Fresh Air & proper air exhaust is also major criteria for large halls and Airtech installed systems ensure that required level of fresh air is incorporated as per the specific requirements.

The equipments and light loads in some special studios.

The interior aesthetics of the hall along with proper air distribution is also an important parameters considered by Airtech for the design of auditorium halls & theatres.

Telecom Air Conditioning

Data centers and server rooms operates 24x7-365 days and needs to be designed for the round year operation

Telecom companies have a very unique requirement of Air Conditioning. They need Air Conditioning for their equipments to perform at desired level round the year. Airtech values this unique requirement and had been able to provide energy efficient, cost effective, eco friendly and sustainable solution to the leading telecom operators and data centers in Nepal. Unlike comfort Air Conditioning telecom equipments need cooling round the year and they have high sensible heat load. Accordingly the HVAC equipments selected must have higher sensible load capacity ensuring that the HVAC units meet the requirement of highly sensitive telecom equipments.

Data centers and server rooms are operating 24 X7 – 365 days and needs to be designed for the round the year operation and also ensuring that there is zero failure. Accordingly Precision Type Air Conditioning of correct capacities with an additional stand by unit is strongly recommended at such sensitive installation. It is highly desirable to understand the amount of heat dissipation from the telecom servers to enable us to provide the correct temperature and relative humidity at these centers.

Airtech currently has the following product portfolio to support telecom/ Data Centers solutions.

Green Telecom Shelters for BTS Sites.
Telecom AC with direct free cooling for BTS sites.
Heat Exchanger Units.
Free Cooling - Fan coil units.
Precision Type Air Conditioners for data centers & server rooms.
Precision Type Air Conditioners with indirect free cooling.
Commercial Air Conditioners with and without free cooling.
Modular Access flooring.

Airtech is very proud to be associated with the following companies to meet their air conditioning, shelter & access floor requirements

NCELL

UNITED TELCOM LIMITED

NEPAL TELECOM LTD.

HOME TV (DTH).

DATA HUB

CLOUD HIMALAYA

OHM Data Center

Industries

Airtech team understands the special requirements of different types of industries for their process cooling.

Heating, Ventilation & Air Conditioning requirement varies in different industries as per their specific requirement. It can be a simple comfort air conditioning for a manager room to an industrial process chilling for sensitive requirements. Air conditioning is required to cool a sensitive panel board which dissipates heat. Sometimes in industries even a fresh air and an exhaust system is installed to ensure air movement in ware housing to ensure that there is no microbial growth. However, in some ware house there is a requirement of Air Conditioning if the products properties degrade in the adverse climate.

Industrial air conditioning must ensure that there is good know how of the actual process so that the designed HVAC can provide the required temperature control. Airtech values the requirement of each industry and designs the system with the feedbacks from the production managers enabling them to meet their process requirement. Sometimes there is a concern of extreme outside condition which needs also to be addressed. Airtech provides the solution by using water cooled package units in such extreme environments so that the AC units life is extended as compared to the air cooled outdoor units.

Electrical Services

Airtech has an expert team of highly competent and experienced electrical engineer. We are able to understand specific requirement of various institutional clients like hotels, resorts, hospitals, malls, industries etc.

Our team can closely work in various electrical activities involving in from point wiring, DB dressing, cabling, trunking, earthing, lightening protection, main panels, transformer etc. Our team is also qualified in ELV (Extra Low Voltage) work to execute fire alarm, PA system, CCTV, access control, HTV etc.

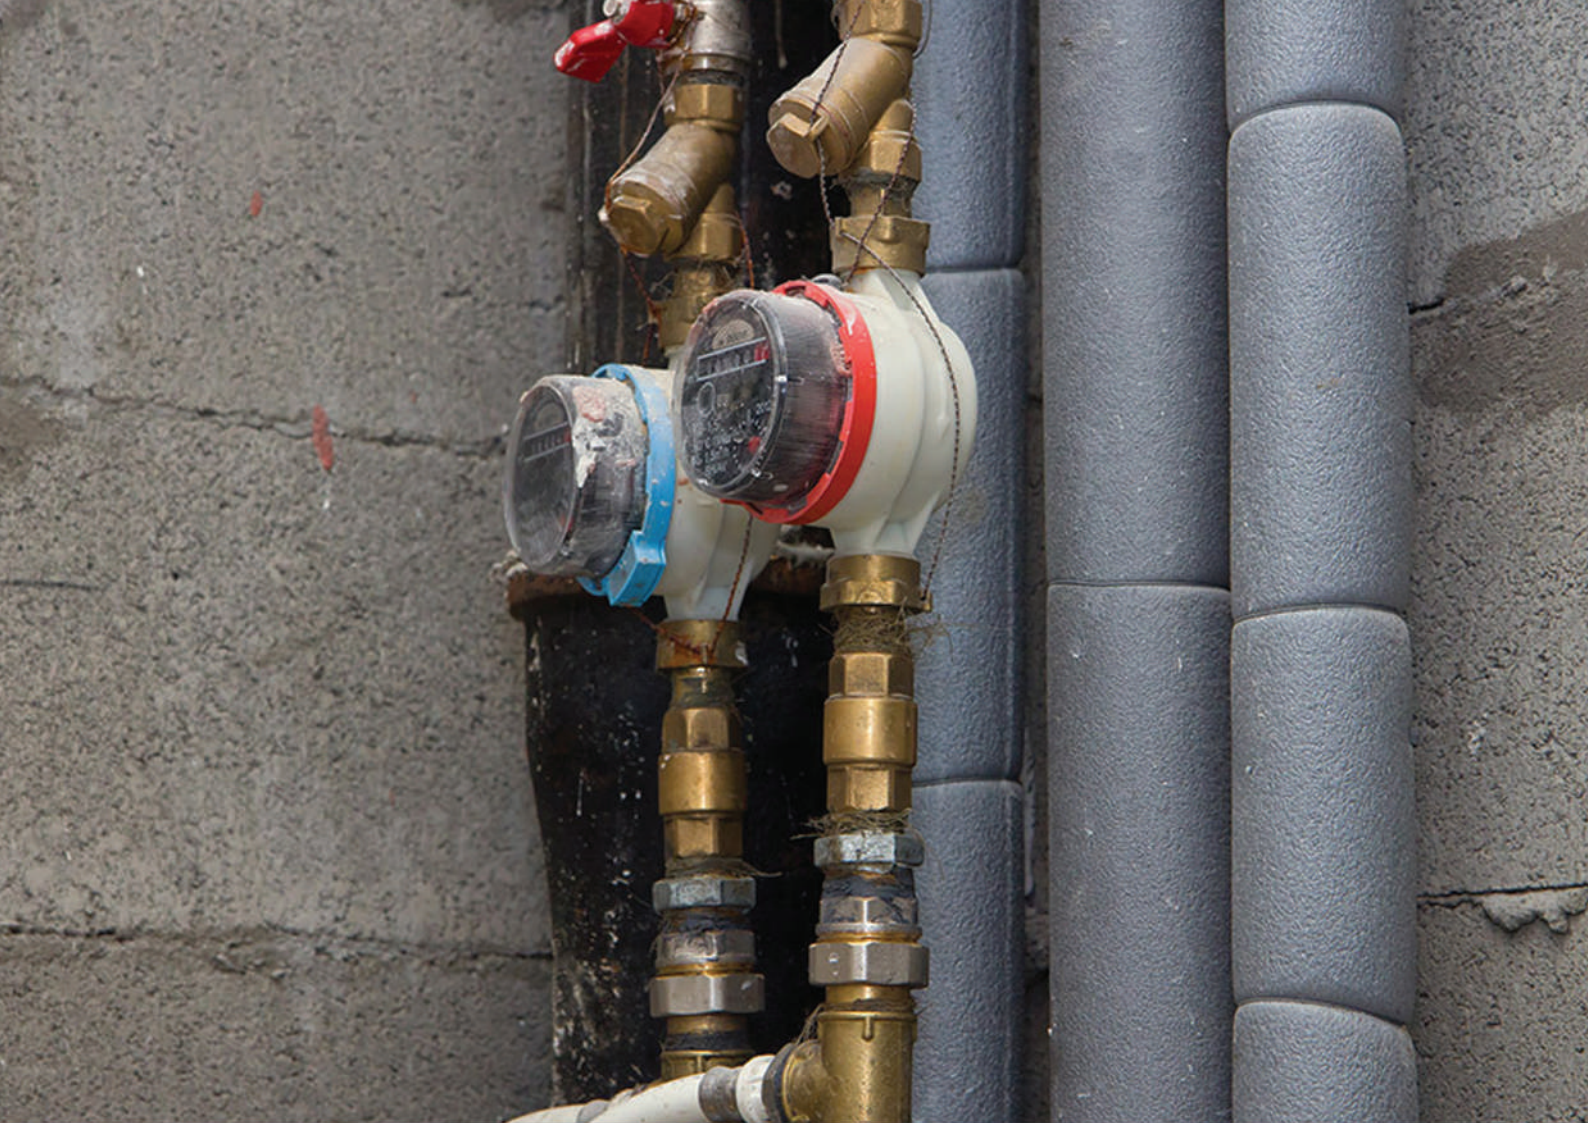

Our expertise in electrical services covers ample variety in the execution of both internal electrification as well external electrification work.

- ▶ Execution of HT and LT feeders and cables
- ▶ Execution of HT and LT panels, distribution boards
- ▶ Preparation of Schematic and working drawings of internal and external schemes
- ▶ Complete Installation of Internal & External Equipment including Internal Wiring, HT/ LT panels, Transformers and metering panels, Distribution boards, Risers, Tap off boxes and all types of ACB and VCB panels etc.
- ▶ Execution of conventional and Intelligent Fire Alarm and PA system
- ▶ Execution of Lightening protection and complete earthing system for HT and LT equipment.
- ▶ Execution of LV and IT network system, Access Control, MATV etc.
- ▶ Execution of intelligent external and street lightings

Public Health Engineering Services

PHE services involve the dynamics of firefighting, fire suppression, stormwater, sewer rain water harvesting, and other special water and waste systems. Our engineers have a vast expertise in execution of PHE services. We have a “whole building” approach and are instrumental in influencing high water efficiency, energy, fire protection, pollution systems and a sustainable site. We are able to provide assessments, recommend alternatives, and thus provide high-functioning systems that meet the client’s very specific individual need as well as assisting in conserving natural resources.

Our expertise covers a wide variety of jobs in Plumbing & Sanitary execution in internal and external plumbing system which includes:

Execution of internal and external plumbing/sanitary system for all type of buildings according to Modern codes of practice

Execution of domestic water supply system.

Execution of Internal and external drainage system.

Execution of rain water/ storm water recharge wells.

Execution of all types of Sewerage Treatment Plants (STP), Water Treatment Plants (WTP), & Effluent Treatment Plants (ETP) etc.

Execution of Pump Room equipment's (Hot and Cold water supply equipment's).

Execution of all types of Modern Sanitary Fixtures

Rain Water Harvesting

FIRE FIGHTING SYSTEM

Our expertise is in the Execution of special fire hazard technology for fire protection systems.

At Airtech, we take fire protection and safety very seriously. We offer fire protection and suppression systems for commercial properties and fully understand the ever-changing demands of customer.

- Wet/Dry firefighting system
- Internal and External Fire Hydrants
- Fire Pumps and Fire Equipment
- Intelligent Fire Alarm system
- Automatic Smoke and Heat detection
- Annunciation and repeater panel
- Kitchen Hood Suppression System
- FM200 and Novec Suppression System

Fire Alarm System Solutions

Airtech has an expert team of highly competent and experienced electrical engineer. We are able to understand specific requirement of various institutional clients like hotels, resorts, hospitals, malls, industries etc.

Our team can closely work in various electrical activities involving in from point wiring, DB dressing, cabling, trunking, earthing, lightening protection, main panels, transformer etc. Our team is also qualified in ELV (Extra Low Voltage) work to execute fire alarm, PA system, CCTV, access control, HTV etc.

- **FAS Installation**
- **Maintenance and Inspection**
- **Monitoring Services**
- **System Upgrades**

Types of Fire Alarm Systems We Offer

- **Conventional Fire Alarm Systems:**
Suitable for smaller buildings, with detectors and call points wired in zones.
- **Addressable Fire Alarm Systems:**
Allows pinpoint identification of the exact location of a fire or fault, ideal for larger and more complex buildings.
- **Wireless Fire Alarm Systems:**
Provides flexible installation options without the need for extensive wiring, perfect for heritage sites or temporary setups.
- **Integrated Fire Alarm Systems:**
Combines fire detection with other safety systems, such as access control, emergency lighting, and sprinkler systems for a comprehensive safety solution.

Extra Low Voltage (ELV)

Airtech provides ELV solutions for various range of sectors. We have a dedicated team of electronics and electrical engineers, supervisors and technicians to provide comprehensive and seamless extra – low voltage solutions. Also, we have OEM trained team who executes various national and international brands. We offer the following ELV system works.

- ▶ FAS & PA System
- ▶ Access Control System
- ▶ CCTV System
- ▶ Telephone System
- ▶ Networking System
- ▶ IPTV & Nurse call System

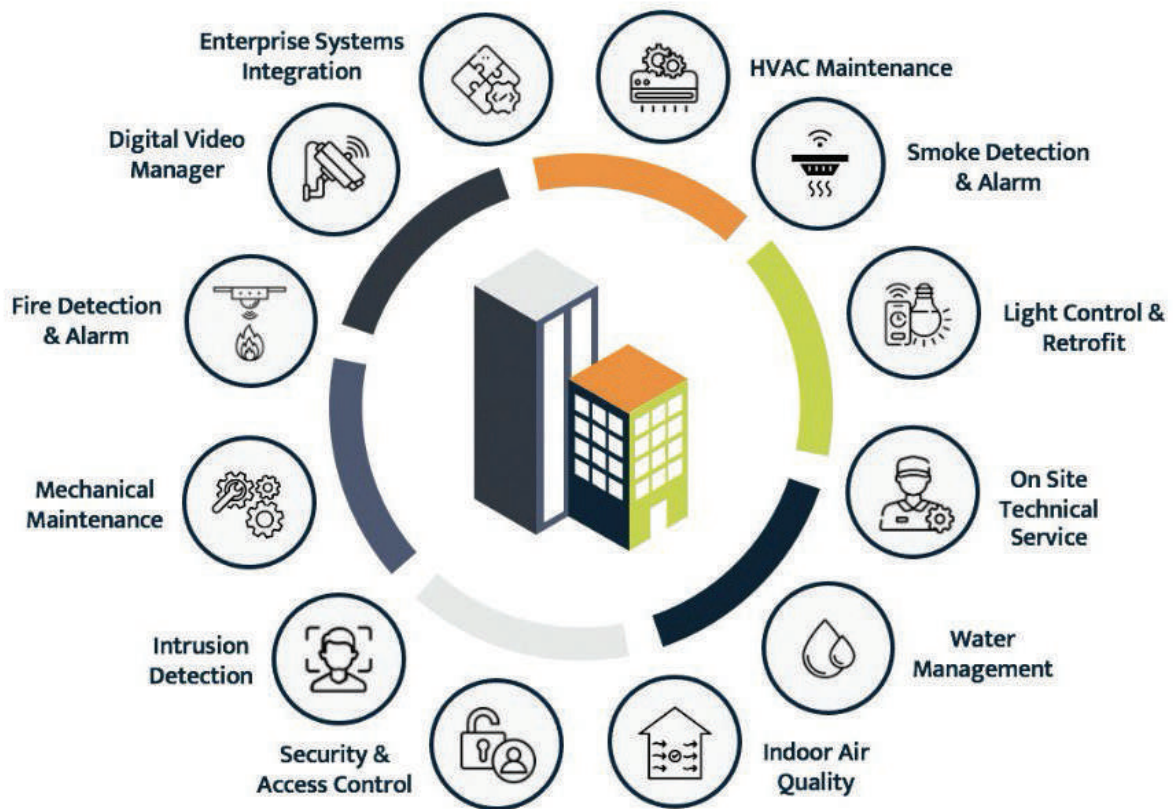

Building Management System (BMS)

Airtech Industries offers building management systems (BMS) for real-time monitoring of building operation. BMS systems are an effective solution for monitoring numerous sub-systems of a building's day to day operation from the comfort of a centralized control room. A user-friendly control interface allows the operator to observe process parameters in real time, detect abnormal operating conditions and respond to alarm conditions. Benefits include reduced field supervision costs, reduced system downtime

due to early detection of emerging issues and improved maintenance as system health is constantly monitored and trackable with reports. The other function of the BMS system is Interfacing between individual smart building applications. Also, it helps to provide information on supervised building functions including, but not limited to, current status, archived historical information, summaries, analysis, displays, and reports on control and management functions.

Building Management System (BMS)

Additional Services

We go beyond the conventional scope of MEP consultancy to provide comprehensive solutions tailored to the unique needs of each project. Our commitment to excellence extends to a wide range of additional services that enhance the functionality, sustainability, and efficiency of your projects.

MEP Audit, MEP Design Peer Review, Energy Audit, MEP Commissioning Checks, MEP Installation Audits, MEP Site Supervision, MEP Due Diligence, Project Cost Optimization Services
